Abstract **draft for night observations**

The great triumph of pharmacology and surgery in the last Century, leaves shadows in the vast area of the relationship between mind consciousness, brain and body, with many disorder on an emotional level from PTSD to panic attacks, which compromise the quality of life in healthy subjects, complicating mild and in particular serious pathological scenarios, which create doubts and fears that tend to destabilize and precipitate the psychophysical balance and performance status.

Psychoneuropharmacology of PTSD and panic attack is very useful to help manage critical issues but generally fails to restore a state of wellness, efficiency and psychophysical balance, with some relevant side effects .

Psicoanalysis and Psicoterapy are very useful, but take long time while panic attack and PTSD are in some way medical emergency.

From Old Indian School developed in Europe by Patrick Veret Umberto Grieco and their colleagueas, was observed some very succesfull technics to manage the troubles on Mind Brain Body axis, that find in panic attack the iceberg. These experiences lack of scientific basis.

The first useful hipotesys was carried by Sir John ECCLES (Nobel Prize for discovery of synapsi)

We can read in Tiengo M. Talking with Sir John, interview with John Eccles on the theory of psychons. In: Seminars on pain. Mattioli Editore, Fidenza, 1992: 2:31-36.

Eccles' proposal of the theory of psychons, according to which psychons interact with the neurons of the cortex through fields of quantum probability modulating their synaptic exocytosis, was not pursued. However, as specified by Tiengo, it is of crucial importance because it is the first attempt at providing a quantum interpretation of the mental modulation of pain perception.

If the paradigms of classical Newtonian physics can be applied to nociception, pain, as well as all the scientific research on mind, consciousness and self, requires a different interpretation: the key is quantum physics.

Tiengo writes: "The perception of pain can therefore be explored more deeply with the elusive world of quanta, conclusively recognising the failure of any attempt to reconcile clinical evidence and experimental data with common sense."

THE PSYCHONEURON COORDINATES EXOCITOSSES BY MEANS OF QUANTUM PROBABILITY FIELDS SIR JOHN ECCLES

In this report we will show a discuss some case report regarding some enigmatic success in the treatment of loss of performance status till to panic attack, in people with various level of responsibility and various diseases, in an integrative approach to increase coherence and performance status. The work was carried face to face and to long distance by phone or videocall, in particular in the work on water and on performance status of Dr Deep N. Singh. More enigmatic data come from the role of Borelliosis in Lyme Diseases and its treatment with tetracycline in a model that seems explained by the last work of Luc Montagnier.

COLOR SCALE OF HOMEOSTASIS AND/OR ENTROPY IN THE BRAIN

NANO-ELEMENTS FROM PATHOGENIC MICROORGANISMS

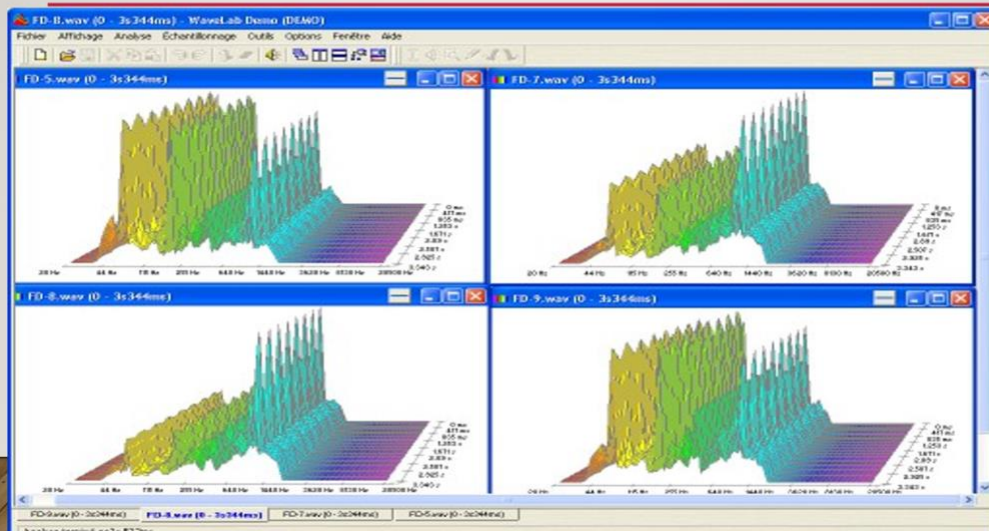

BY PROFESSOR LUC MONTAGNIER, M.D.*

There are many ways by which infectious agents can persist in their host, despite an adequate immune response of the latter and the medical use of strong inhibitors of their replication. Retroviruses have evolved to find the best solution order to persist silent in the host cell by integrating their DNA into the cell DNA. But bacteria have also learned how to persist almost indefinitely in tissues or organs in a resting state, insensitive to antibiotics and poorly exposed to immune reactions also a general property of pathogenic microorganisms to adapt their genome very rapidly to any targeted reaction against them either endogenous (immune response) or exogenous (treatment). I will describe some new phenomena occurring in bacteria and viruses which may contribute to the chronicity of many diseases and to the difficulties of eradicating their infections.

The first is what can be best defined as genetic dispersion. When a mycoplasma suspension is filtered through filters of 100 and 20 nM, which are pore sizes much lower than the average size of these microorganisms (300 nM), the filtrate is apparently sterile when it is cultured in synthetic medium or analysed by DNA PCR and nested DNA PCR. However when the filtrate is incubated with human T lymphocytes (previously checked for lack of infection by the mycoplasma), we detect again the resurgence of the mycoplasma with all its characteristics after 2 or 3 weeks of culture, even when the filtrate is diluted down to 10⁻⁶.

THE CASE OF HIV/AIDS (IN COLLABORATION WITH CIRBA, IVORY COAST) AFRICAN PATIENTS, GENERALLY INFECTED WITH THE A/G HIV1 SUBTYPE (IN VITRO : CEM CELLS INFECTED WITH HIV1 LAI)

These experiences that seems reveal an implicit order connected strongly with the well studied explicit order (see Bohm and Josephson references) are based on the Indian traditions of Prana, Subtil Body, Chakra and Nadi (equivalent of chinese Meridian). Some useful biotech development by Electroacupuncture of Voll to T Helper of Altimed with chakraterapy frequencies, to last chakra version of Methatron, show that may be, we are in a biotechnological reality beyond mystics and esoteric vision prevalent in the field.

The work of David Bohm, John Eccles, Jacques Benveniste, Giuliano Preparata, Emilio Del Giudice, Allan Widom, Yogendra Srivastava, Brian Josephson, and many others (see review of M. Scalia e coll. <http://ibb.kpi.ua/article/view/140255>) need more deep basic and applied research to any level by

completion of Maxwell equation about the origin and the role of Potential Vector discussed in the last COHERENCE by Victor Koledov and Svetlana Von Gratosky

Recent theoretical and experimental results in the field of biophysics appear to indicate the possibility of quantum entanglement and nonlocality at the biological level, between spatially separated pairs of human subjects and also between basins containing neurons derived from human neural stem cells. If this research continues to be upheld in a more replicable fashion, this could have very important implications in the area of controllable superluminal communication. Experiments are proposed in an attempt to address the issue of whether controllable superluminal communication is possible and, if it is, to utilize it in an attempt to determine if extraterrestrial intelligence really exists, within the framework of astrobiological nonlocality.

Some help in this direction could arrive from a more advanced anatomophysiology that pay attention to meridians and chakra in the regulation of physiopatological process, and clear many interesting enigma and good practise developed in the last thousand of years to help people to be healthy powerfull and happy.
